POST-TREATMENT INSTRUCTIONS – Laser Genesis™

To obtain your best possible results, it is important to care for your skin appropriately after your treatment. Please note the following:

- You should treat your skin as though you have a mild sunburn for the next few days.
- When bathing or washing your skin, be mindful of the heat of the water. Wash when you normally would with a gentle cleanser. You may utilize your regular skincare routine, unless otherwise directed by your nurse.
- You may notice some minor redness after your treatment. This can last a few hours.
- If you experience any blistering or oozing, you should utilize an antibiotic ointment (such as Polysporin) twice per day.
- You should avoid sun exposure to the treated area for the first few days. When sun exposure is unavoidable, utilize a broad-spectrum sunscreen with a physical block (such as zinc oxide or titanium dioxide) with a minimum SPF of 30.
- At least two treatments spaced a minimum of two weeks apart are recommended. Typically, we would suggest a series of five treatments to obtain the best results.

Please notify the clinic if you experience prolonged redness, excessive swelling/puffiness, blistering, or any unusual side effects: 250-595-3888.
